Sharks

There are more than 500 different species of shark, including the great white shark, grey reef shark, hammerhead shark and tiger shark.

Where do they live?

Sharks can be found in every ocean.

The most shark attacks have been in Australia, South Africa, America and Brazil.

What do they eat?

Some types of shark can be deadly, but only about 12 species have ever attacked humans.

What sharks eat depends on its species and where it is.

Most sharks are meat eaters so they like to eat fish and other sharks. Some larger sharks eat dolphins, sea lions and small whales.

Smaller sharks eat small aquatic life like clams and crabs.

Big Facts

1. A group of sharks is called a shoal, school or shiver.
2. Sharks have a skeleton of cartilage but no bones!
3. A baby shark is called a pup.

What are they good at?

Sharks can smell a single drop of blood in the water from 400 metres away.

They can hear fish moving from around 500 metres away.

Great white sharks can swim up to 18mph!

Amazing Fact!

Most shark species would die if they stopped moving. As long as they keep swimming, water keeps moving over their gills, which keeps them alive.

Shooting for the Stars

Our Planet

We live on planet Earth. Our planet is covered in land and water

In the water, there are lots of amazing fish and sea creatures.

On land, we build houses, grow plants and take care of animals.

Our Solar System

The Sun is at the middle of our solar system. There are 8 planets in our solar system that all move around the Sun.

The planet closest to the Sun is Mercury. The planet furthest away from the Sun is Neptune.

The Moon

The Moon travels around the Earth. Astronauts travelled to the Moon in a rocket to see what they could find.

Did You know?

The first astronaut to land on the Moon was Neil Armstrong in 1969.
